Guidelines to create your graphic file

Prints are produced from the following four primary colours : Cyan, Magenta, Yellow, Black

Files must be produced in final output size and the text vectorized.

It is advised to include markers and a 1 cm bleed area.

The minimum file resolution is 72 dpi (final output size) and 100 dpi if the file includes text.

We accept file format created with Adobe Photoshop™, Adobe Illustrator™, Adobe InDesign™, Quark Xpress 7™.

We recommend all fonts be vectorized

By vectorizing all your texts, you avoid font conversion problems.

The following fonts are recommended : Post-Script, OpenType ou TrueType

Please remember to send us your file in one folder including the source images and the Pantone colours.

Also include a proof PDF or JPEG file entitled « control » for verification.

Our commitments

Today, commitment to the environment has to be more than just an idea. It must be translated into practical measures ! That is why our Research and Development team strive to design products that are as ergonomic as possible whilst minimizing the quantity of materials used.

By working to reduce the weight of our products, duo. is also reducing the environmental impact of their transportation.

Optimizing the weight and volume of our products not only benefits the customer but also minimizes their environmental footprint throughout their lifecycle (less cardboard, less adhesive tape, less fuel, less storage space...)

Our products are manufactured using recycled aluminium and we work hand in hand with our suppliers to limit waste.

The duo.recycling programme reuses products which have reached the end of their lifecycle.

We now recommend covering our structures with fabrics made from recycled fibers and printed with dye sublimation inks (a printing process using water based inks, containing 80% water).

Today, duo.'s approach is based on a simple idea : offering irresistible eco-friendly products !
